EDUCATION

Johns Hopkins University (JHU) | M.S. Applied Economics | GPA: 3.57 Aug 2025 – May 2027

- Focus: Financial Economics
- Coursework: Financial Econometrics, Financial Economics, Cost-Benefit Analysis, Macro/Micro Theory
- JHU Economics Society – Mentor & Tutor for Econometrics, Game Theory, and Microeconomics
- JHU E-Sports – Provided coaching and professional development advice for JHU E-Sports program

University of Houston (UH) | B.S. Economics & Public Policy | Cum Laude Aug 2022 – May 2025

- Focus: Quantitative Economics & Statistics | Quantitative Economics Certificate
- UH Economics Society – Member & Tutor; guided lectures & workshops on microeconomics and econometrics
- Code [COOGS] – Peer Mentor; built SQL databases tracking organizationl finances
- Coog Esports – As a player & officer won 6 tournaments across 3 different games, obtaining funding from university officials

EXPERIENCE

UGI – Amerigas Propane | Commercial Optimization Analyst | Houston, TX Aug 2026 - Present

- Built and trained AI agents in Kiro (Python & Jupyter) to automate Snowflake data workflows
- Migrated Excel models to Python web apps on AWS, reducing run time by 99% (from 2 Hours to 1 Minute)
- Used SQL and Python within Snowflake for trend Analysis and data vulnerability identification, reviewed in Tableau and QlikView
- Supported prompt engineering guidance, cutting token usage by 60% and increasing productivity by 70%

Enbridge – Tidal Energy Marketing | Commercial Analyst (Spring Contract) | Houston, TX Mar 2026 – Jun 2026

- Audited and reconciled 150+ daily commodity trades across natural gas portfolios, validating risk exposure and mark-to-market P&L
- Implemented Excel-based risk models and SQL databases tracking position valuations, accruals, and deal-capture accuracy
- Synthesized pricing analytics and exposure data into reports for risk committees and commercial stakeholders

Harris County | Financial Analyst Intern | Houston, TX Jan 2025 – May 2025

- Developed VBA macros automating financial reconciliation and variance detection, reducing processing time by 60%
- Tracked fund allocation and budgetary compliance across 60+ Municipal Utility Districts, flagging anomalies for review
- Oversaw integrity of 100,000+ financial records (1099 forms), ensuring accuracy for year-end reporting and audit readiness

University of Houston | Undergraduate Research Fellow | Houston, TX Apr 2024 – Apr 2025

- Performed econometric analysis on 1,000,000+ data points using R, Excel, and STATA to test labor-policy hypotheses
- Reviewed 11 academic papers and presented findings on AI's impact on labor to faculty and peers
- Authored professional research paper evaluating how AI affects labor designing policy actions to mitigate job loss & unemployment

PROFESSIONAL PROJECTS

Contracting Model – Amerigas Propane | Python, Clade Code, Excel

- Automated Excel file ingestion, eliminating manual input and streamlining reporting
- Innovated projection formulas, which informed marketers' spot decisions, and overall increased procurement profit
- Transferred legacy excel contracting models to Python web application to decrease run time by 99%

Hedge Strip Tracker – Amerigas Propane | Excel with Python integration

- Illustrates daily forward curves provided by argus to fit Amerigas portfolio
- Combines hub curves into a weighted blend, which are priced by delivery month
- Model performs a look back to see how forward curves have changed relative to portfolio on a 1D / 1M / 1Y stance

Crude Oil Price Forecasting Model – Enbridge | Python, OLS Regression, HAC Standard Errors

- Conceptualized three model families (price levels, returns, WCS–WTI differential) for real crude prices, validated walk-forward
- Engineered time-varying geopolitical-risk features with Newey-West HAC errors; differential model hit 71% directional accuracy
- Back tested confidence- threshold strategy yielding ~30pp outperformance vs buy-and-hold at one-eighth the drawdown

PADD 3 Sour & Heavy Crude Supply/Demand Balance Model Gulf of Mexico (GoM) - Enbridge | Excel

- Engineered month-by-month Excel model balancing Gulf Coast sour/heavy supply from GoM, imports, and Canadian pipeline flow
- Sized heavy demand from refinery delayed-coking capacity and reconciled inter-PADD pipeline movements to reported data
- Parsed 10+ years of EIA history into seasonal norms with configurable run scenarios and monthly surplus/deficit outputs

SKILLS

Technical: Python, R, SQL, VBA, STATA, MATLAB, LaTeX, Excel (Macros, Pivot Tables, XLOOKUP), HTML, JSON

Risk & Analytics: Regression Modeling, Causal Inference, Stress Testing, Credit & Counterparty Risk, Variance Analysis, Forecasting

Software: Microsoft Office Suite, Power BI, GitHub, VS Code, Claude Desktop, Google Scholar, Overleaf

Certifications: Quantitative Economics **(UH)** | Statistics in Python **(DataCamp)** | Power BI **(LinkedIn)** | AI Fluency **(Anthropic)** | Responsible Conduct of Research **(CITI)**
